ARCHITECTURAL  
FINISHES

# Coatings Design™

2ND EDITION

## Granyte® - a seamless stone veneer finish

Granyte by Triarch provides a beautiful, seamless stone finish in an understated elegance. Applied by steel trowel, it easily conforms to curved surfaces, transforming wallboard, concrete and masonry into an elegant, seamless stone surface. While Granyte is a veneer stone, it creates a solid, substantial impression. Pulverized stone, graded for color and uniformity, combined with light reflecting mica in a clear acrylic resin, allows Granyte to be quickly applied by trowel to common substrates. The applications are endless, from residential to commercial, hospitality to churches.

*Conference room at a manufacturing company in upstate New York.  
Granyte in Raw Silk #154 w/silver mica applied directly to drywall.*

# Granite<sup>®</sup> - a seamless stone finish

**Granite — 10 yr. product warranty**

## Proven exterior performance

Granite works well for exterior installations. More specifically the Granite System is appropriate for application to all forms of concrete and masonry substrates. Approved exterior substrates include: poured in place concrete, precast, CMU, as well as a scratch & brown substrate. The church shown below used Granite for the primary structure and the adjacent out buildings to provide a thoughtfully executed design and coordinating campus effect. The savings as compared to slab stone or precast stone were very substantial.

Granite has been tested to handle all kinds of environmental extremes and carries a 10 year warranty. Accelerated weathering, freeze/thaw testing, salt spray, water resistance, mildew resistance, UV resistance, and adhesion are some of the tests. See our product data sheet (T109) on our website for all the details.
